Assignment No. 13

Title

Design and Development of a Responsive and Interactive Website using HTML, CSS, JavaScript and Deployment using GitHub Pages / Netlify

Problem Statement

Design and develop a responsive and interactive website using HTML, CSS, and JavaScript, and publish the website using GitHub Pages or Netlify.

Objectives

1. To design a responsive website using HTML and CSS.
2. To implement interactivity using JavaScript.
3. To deploy a website using GitHub Pages or Netlify.

Theory

Deployment Platforms

GitHub Pages

GitHub Pages allows hosting static websites directly from a repository.

Netlify

Netlify is a platform for deploying websites easily with drag-and-drop or Git integration.

10. Steps for GitHub Deployment

1. Create repository
2. Upload files
3. Enable GitHub Pages
4. Access website link

Steps for Netlify Deployment

1. Create account
2. Drag and drop project folder
3. Website gets deployed instantly

Conclusion

In this assignment, a responsive and interactive website was successfully developed using HTML, CSS, and JavaScript. Responsive design techniques ensured compatibility across devices, while JavaScript added interactivity. The website was deployed using GitHub Pages and Netlify, demonstrating real-world web hosting practices. This experiment provides essential skills required for modern web development.

Viva Questions

1. Why is deployment important in web development?
2. What is a hosting platform?
3. Name some free hosting platforms.
4. What is GitHub Pages?
5. What is Netlify?
6. What type of websites can be hosted on GitHub Pages?
7. What is the difference between local hosting and live hosting?
